

## ROPE ACCESS SERVICES

### Confined Space Rope Access

#### The Problem

- The scaffolding and mechanical repair team were not able to access the area from below while the overhead hazard was unsecured.

#### The Solution

- Brock mobilized an integrated team of mechanical trades, NDE inspectors and rope access technicians to solve the problem in under 36 hours.
- The team developed the confined space rope access, rigging and rescue plan.
- They secured the overhead hazard by cutting rigging points and installing rigging under the guidance of the clients engineering team.
- Secured the failed steel in three locations and arrested any cracking to prevent further failure.

#### Rope Access Benefits

- Quick mobilization time to site.
- 48 hours to access and secure the failed steel.
- Reduced shut down time of client's assets.

#### Cost Savings

- \$150,000/day of lost production while this asset is shut down.
- Our quick response time allowed for a significant time and cost savings on this project.
